

# CORE MOBILE & NOTIFY

## Core Mobile & Notify

Clinicians don't stay tethered to a workstation for every shift—neither should the tools they need to effectively manage patient care. Core Mobile & Notify links clinicians to Core Work Manager from their mobile device, combining a data-rich optimized view with real-time, provider-centric notifications. It's more than just a convenient set of tools—it's a HIPAA compliant and secure information ecosystem that bridges the EHR-to-mobile gap.

## Convenient access to actionable data

Core Mobile & Notify offers full access to the Core Work Manager Patient List, which provides a dashboard view of all patients on a provider's service. View specialty-specific QuickView patient summaries, clinical data, quality metrics, handoff and sign-out notes, to-do lists and more. With rapid access to key patient data from Core Work Manager and your EHR, providers can spend less time at desktop computers, eliminate duplicate data entry, go paperless during rounds, and devote more of each shift to direct patient care.

# Safer patient handoffs in less time

Core Mobile & Notify deliver the clinically proven benefits of Core Work Manager's sign-out/handoff tool directly to provider smartphones. The sign-out approach supports IPASS/SBAR and other evidence-based practices to communicate information about patients and pending tasks. It can be customized to meet the clinical needs of any service line. Users can update to-do lists, view their task list and complete pending tasks, sign-out and handoff notes from their device, and execute batch sign-out for groups of patients—without waiting in line for an available desktop workstation.

# Real-time notifications with automated escalations

Core Mobile & Notify close the EHR-mobile gap with real-time provider-centric notifications that deliver relevant information directly to their mobile devices. Notifications can be customized by clinical specialty and personalized criteria, with critical results alerting and automated escalation to ensure that important information never falls through the cracks. With the right information in front of them, providers can more readily identify clinical trends and issues and prioritize urgent situations first. Receive real-time notifications for:

- New consult notes
- Updated micro results
- Overnight one-time lab results
- Completed discharge barriers
- Patient Transfers
- Abnormal baseline or trending Troponin levels
- More

# CORE MOBILE & NOTIFY KEY BENEFITS

**REAL-TIME SYNCHRONIZATION**  
Information automatically flows between Core Work Manager, Core Mobile & Notify and the EHR, with no additional action or duplicate data entry required. The EHR and Core Mobile & Notify are always in sync, in real-time.

**SPECIALTY AND CLINICAL SERVICE-SPECIFIC VIEWS**  
Spend less time hunting for critical information with views tailored for clinical specialties and individual provider preferences.

**AVOID DELAYS IN CARE**  
Real-time notifications help providers avoid delays in changing treatment needs.

**GET PATIENTS' OUT THE DOOR QUICKER & REDUCE LOS**  
Accelerate patient discharge by creating real-time awareness of new information that is required to prepare a patient for discharge.

**IMPROVED EFFICIENCY**  
Less clicking in the chart searching for updated results that you've been waiting for. Get them on your phone in real-time instead.

**CRITICAL INFORMATION AT THE RIGHT TIME**  
Customized alerts and escalations prevent critical results from getting lost in the day-to-day shuffle. Quickly respond to calls and nursing requests

**INTUITIVE NAVIGATION**  
Users can easily access handoff notes, results, allergies and medication, diet, and on-call/coverage information.

**BETTER SUPPORT FOR ALL MEMBERS OF THE CARE TEAM**  
Provider-centric notifications reduce the burden on nurses to identify clinical trends and issues, with the EHR as a backup threat detection system.
