# CORE INTERDISCIPLINARY ROUNDS

## New from TransformativeMed

### Core Interdisciplinary Rounds

The data is clear: Interdisciplinary rounding leads to better communication and collaboration between clinicians, improved care coordination, and decision-making that centers on patients and their needs.<sup>1</sup> Core Interdisciplinary Rounds combines structured rounding with better data accessibility and intelligent workflows, so hospitals, clinicians, and patients can reap the benefits.

### Smarter rounding

Core Interdisciplinary Rounds provides a real-time smart rounding checklist that adapts non-electronic rounding methodologies for EHR integration, providing seamless workflow and easy access through the patient list in Core Work Manager. No unnecessary toggling between applications, endless clicks, or time-consuming double-documentation. The care team can keep their focus where it truly belongs—on the patient.

---

### Better information

As care team members move through Core Interdisciplinary Rounds' smart rounding checklist, the application automatically provides side-by-side contextual patient data to support effective and efficient clinical decision-making. Concurrent documentation of team rounding and real-time data access mean that every member of the team sees the most up-to-date information.

# Enhanced care team communication

Core Interdisciplinary Rounds is designed for real-world workflows, with synchronous and asynchronous rounding capabilities between members of the interdisciplinary care team—providers, nursing, case management, pharmacy, and other specialties. Information is immediately available to all members of the care team as soon as it's entered.

## Emphasis on quality and safety

With its real-time contextual data and guidance, Core Interdisciplinary Rounds' smart rounding checklist is a powerful tool to ensure quality and safety. Safety concerns—including pressure ulcer documentation, mobility, urinary catheters, central lines, VTE prophylaxis, glycemic management, restraints, and more—are reviewed regularly and needs addressed in a timely manner.

## Easy access and intuitive workflows

Core Interdisciplinary Rounds is integrated with Core Work Manager with no additional logins. The smart checklist features smooth and easy navigation and one-click progress to the next item. Patient data is layered with clinical guidelines to support decision-making without forcing users to toggle between tabs and applications. Providers can enter orders directly from the checklist with embedded quick-pick ordering.

### Use Core Interdisciplinary Rounds to review and discuss:

Hospital course

Current status and overnight events

Goals for the day

Quality and safety checklists

Medications and Treatments

Therapist recommendations

Discharge planning and barriers
