# CORES Work Manager

## The Intelligent Care Platform

The many benefits of the electronic health record (EHR), including enhanced privacy and security of patient data, the promotion of accurate patient data at point of care, and improved access to patient records<sup>1</sup> are well known. The challenges to enhance the EHR, such as lengthy implementations, limited adaptability to meet specific clinical practice needs, as well as product customization and optimization<sup>2</sup> are the drivers of the *wave of the growth and change*.

***TransformativeMed built the platform that changes your EHR from data collection—to useful patient-centric health information screens.***

Streamline patient care, clinical progress and team communication with this EHR embedded - application that synchronizes information from mobile-to-desktop. Clinical teams have rapid access to real-time specialty specific data, when they need it.

Critical patient health data to organize rounds, assess and manage care, convey discharge readiness, and conduct handoffs. Workflow defined by clinicians with rich, actionable EHR data is quickly presented on your CORES patient screen.

---

## Solution

---

Optimize clinician collaboration and improve patient safety and outcomes with CORES Work Manager.

# TransformativeMed's CORES Work Manager:

<b>Product HIGHLIGHTS</b>	<ul style="list-style-type: none"><li>• Seamless provider hand-off and communication tool</li><li>• Improves discharge planning process</li><li>• Customized specialty-specific reports and patient worklists</li><li>• Effective sign-out process providing efficient transfer of patients</li></ul>
<b>Instant COMMUNICATION</b>	<ul style="list-style-type: none"><li>• Reduce the burden on nurses to identify clinical trends and issues. Back them up with the EHR as a “threat-detection” system.</li></ul>
<b>Critical RESULTS</b>	<ul style="list-style-type: none"><li>• Specialty-specific workflow and content</li><li>• Automatically schedule multidisciplinary Rounds</li><li>• Tag results for Dynamic Documentation</li><li>• Advanced assessment and plan management and documentation</li><li>• "Discharge-before-noon" workflows</li><li>• Workflow integrated handoffs</li><li>• Progress-note and discharge summary integration</li></ul>

“I also can't tell you enough about how much CORES has helped my conversations with patients, and our communication across disciplines. When we're in a room with a patient with a complicated condition, and I have a family member that's grilling me on the details, it's really nice to be able to answer all of their questions right there. I'm not just speaking from memory or saying let me step out and look at the computer. With CORES, we walk in armed with all the information, nice and condensed, and accurate.” – PHYSICIAN USER

Learn more about the CORES Intelligent Care Platform, and transform your EHR into a clinical and collaborative workflow system that supports timely and consistent care by providing clinicians with rapid access to critical patient health data.
